Hidden Treasure Mine
Pershing, Nevada

40.2782°N 117.7373°W

The Hidden Treasure Mine is in Pershing, Nevada. Historically the site has been part of the Kennedy Mining District. The Hidden Treasure Mine was closed at the time of data entry with no known plans to re-open. The Great Basin of the Intermontane Plateaus characterize the geomorphology of the surrounding area.

* Mine bounds on map indicate the general area that a mine occupies. For a detailed map, refer to the overseeing BLM field office.

** The mine central point is based on an average of the mine's bounding box(es) and does not necessarily fall on the claim itself.

¹ World-class significance is determined by total endowment of the contained commodity. This includes all past production and remaining reserves. Each commodity is considered separately and commodities cannot be combined to arrive at a significant size. The tonnage thresholds are from the mine model grade-tonnage studies. As of June 2008, many entries were classified as significant under less strict rules.

Learn more about the Bureau of Land Management, Public Land Survey System, and mining claims.

We receive lots of emails from people who find their name or a relative’s name on our site and want to know if this means they have some right to the land listed under that name.

Whether it is filing a mine or researching one, the administering BLM office is going to be the definitive source.

Mine handled by the Bureau of Land Management are not mapped by latitude and longitude, instead, these mines harken back to the Public Land Survey System.

A “township” can refer to two different things. Both are part of the PLSS measurement system but have different uses.
